Scored: CII3

I. Scale Description

The Coder Impressions Inventory (CII) is an adaptation of several impression scales from the Oregon Social Learning Center, including the Observer Impressions Inventory (Capaldi & Patterson, 1989). The CII is completed as a component of the Parent-Child Interaction Task (PCIT), which occurs in the home during the summer interview. Once the PCIT is completed, the interviewer then completes the Behavioral Coding System and the Interaction Rating Scales before beginning the CII. The CII is based on the observer's overall impressions of the parent, child and their interactions. The CII is designed to collect information on the family, which may be missed by strictly defined microanalytic observational procedures or by global ratings. The measure consists of 59 items and a 6-item addendum, both of which are completed at the same time. The measure was not collected in year 1 for cohort 1 but was added in the second year of the study.

II. Report Sample

These exploratory analyses were conducted on the first cohort on the high-risk control sample (n = 155) and the normative sample (n = 387, 463 with overlap) from the third year of the study. 34 records were missing the complete measure. 9 records were missing from the control sample (2 from Nashville, 3 from

Pennsylvania, and 4 from Washington) and 30 records were missing from the normative sample (14 from Nashville, 7 from Pennsylvania, and 9 from Washington). These numbers may reflect some overlap between the two samples. In addition, it should be noted that 10 records from Durham were missing responses for 22 of the items in the measure, with no discernible pattern.

III. Scaling

Questions 2 through 32 of the measure focus on describing the interactions between the mother and the child during the visit (i.e. the child did not comply with at least one parental request/command, the parent used time-out, the child was physically affectionate with the mother). Questions 35 through 58 ask the interviewer to describe the parent or family (i.e. mother is a positive and reinforcing parent, the mother uses nagging to get compliance, the parent relates to the child as a peer). These questions are generally scored on a response scale of 1 to 3, where 1=did not occur, 2=one example, and 3=multiple examples.

Questions 1, 33, 34, and 59 are summary type questions. Item 1 asks for an overall summary of the child's conduct during the observation (on a scale of 0 to 6, with 0=spectacular and 6=awful), items 33 and 34 ask for percentages of time (on a scale of 0%-100%) the mother (33) and child (34) were misbehaving, and item 59 asks whether the family looked like they needed intervention (on a scale of 0 to 4, with 0=definitely and 4=not at all). Items 1, 33, and 34 are rescaled so that the items are on the same scale as the other items in the measure. Item 33 is also reverse-scored.

Twelve questions offer the interviewer an additional choice for response. Interviewers have the option of choosing 0 (no basis) for these questions, as well as the 1 to 3 response scale used on the rest of the measure. These questions include 5 (the parent threatened punishment for a transgression and followed through), 9 (the parent tried to pleasantly tease the child out of a sour mood), 10 (the parent clearly pinpointed the misbehavior when disciplining), 11 (the parent labeled the misbehavior but no follow-through), 13 (the child did something clearly prosocial and the parent ignored it), 22 (the parent ignored the child's inappropriate behavior), 36 (the mother encourage aggressive or antisocial behavior), 37 (the child seemed to enjoy the parent's verbal rewards), 47 (the parent expressed anger/hostility while disciplining), 49 (the parent seemed tentative when disciplining the child), and 50 (the parent seemed to discipline the child well). Interviewers were instructed to choose 0 as a response only if there was no information that he/she saw to form the basis of a judgment.

One other scoring note is that a number of items are reverse-scored. These items are 6 (the parent made unreasonable requests), 7 (the parent used guilt induction to get compliance), 13 (the child did something clearly prosocial and the parent ignored it), 21 (the parent did not pay attention when the child talked), 33 (the percentage of time that the mother misbehaved), 40 (the parent was overly permissive), 41 (the parent's discipline was erratic), 45 (the parent hovered over the child), 52 (the parent related to the child as a peer), 53 (the parent seemed distant from the child), 55 (the child treated the mother with respect), and 56 (the child seemed distant to the mother).

The questions that come from the addendum, H1-H6, are completed after the main inventory is completed. These six questions summarize the parent's behavior with the child. The first 5 questions discuss whether the parent used any of the following in an appropriate manner: labeled praise, praise for child compliance, clear instruction (alpha commands), "when-then" rules, and standing rules. The last question asks whether the parent used physical punishment (regardless of appropriateness). All six questions use the same response scale as with the main inventory for coder impressions, where 0=no basis, 1=did not occur, 2=one example, and 3=multiple examples.

There are six subscales for this measure. Items for the main inventory as well as for the addendum comprise the subscales. All of these subscales are mean scores that are based on factor analysis or are theoretically derived.

Subscale	Items
Parent Warmth (CII3WAR)	13r, 20, 21r, 23-25, 29, 35, 51, 53r, H1, H2
Appropriate Discipline (CII3APP)	6r, 7r, 8, 15, 19, 33rx, 40r, 41r, 45r, 58, H3-H5
Harsh Discipline (CII3HAR)	4, 17, 18, 39, 46
Physical Discipline (CII3PHY)	31, H6
Child Warmth toward Parent (CII3CWM)	12, 26, 30, 37, 56r
Child Noncompliance toward Parent (CII3NON)	1x, 2, 27b, 32, 34x, 54, 55r

Cronbach's alphas were calculated for each subscale and are shown in the table below:

Subscales	Cronbach's Alpha	
	Control Sample	Normative Sample
Parent Warmth (CII3WAR)	.86	.84
Appropriate Discipline (CII3APP)	.84	.81
Harsh Discipline (CII3HAR)	.78	.77
Physical Discipline (CII3PHY)	.06	.31
Child Warmth toward Parent (CII3CWM)	.73	.69
Child Noncompliance toward Parent (CII3NON)	.85	.82

All but one of the scales showed a high level of internal consistency for both the control and the normative samples. One subscale, *Physical Discipline*, showed an inadequate level of internal consistency for both samples.

IV. Differences Between Groups

A series of t-tests between the high-risk control sample and the normative sample (including the overlap) indicated significant differences for four of the subscales: *Parent Warmth*, *Harsh Discipline*, *Child Warmth toward Parent*, and *Child Noncompliance*. Three of the subscales also had a normative mean greater than the control mean; these subscales were *Parent Warmth*, *Appropriate Discipline*, and *Child Warmth toward Parent*.

In addition, three items also indicated significant differences between the high-risk control sample and the normative sample. These were item O3G3 (the child did not comply and the parent followed up with another command/reprimand), item O3G27a (the mother was angry or irritable), and item O3G59 (whether the family needed intervention).

Coder Impressions Inventory: Subscales

Variable	Normative Sample		Control Sample		DF	t Value	Pr > t

V. Recommendations for Use

Analysts should note that three of the subscales were normally distributed for both the normative and control samples: *Parent Warmth*, *Appropriate Discipline*, and *Child Warmth toward Parent*. Two scales, *Harsh Discipline* and *Child Noncompliance*, were positively skewed for both samples. The *Physical Discipline* scale was normally distributed for the normative sample but was negatively skewed for the control sample.

Two scales, *Harsh Discipline* and *Physical Discipline*, showed indications of floor effects. With *Harsh Discipline*, 72% of the normative sample and 63% of the control sample had scores between 0.0 and 1.0 (with 3.0 being the highest possible score). With *Physical Discipline*, 98% of the normative sample and 97% of the control sample had scores between 0.0 and 1.0 (with 3.0 being the highest possible score).

The *Physical Discipline* scale is only composed of two items, 31 (the mother was physically aggressive with the child) and H6 (the mother used physical punishment for the child). Both the normative and control samples had a low inter-item correlation for this scale, 0.19 for the normative sample and 0.03 for the control sample. Analysts should note that in a technical report on the year 2 data for this measure (McMahon et al.), the normative sample had a low inter-item correlation (0.17) but the control sample had an acceptable inter-item correlation (0.54). The recommendation in that report was to use the *Physical Discipline* scale for the high-risk sample but not for the normative sample. Analysts should use this scale with caution.
