I. Scale Description

The Life Changes measure, which was originally part of a larger measure called Developmental History, consists of a 15-minute interview that is completed with the parent as part of the summer interview. The Developmental History, developed and used by Dodge and colleagues (1990), is part of a longitudinal study of family origins of children's behavior problems. The measure assesses a number of constructs: perceptions of the parent-child relationship, developmental history, life changes, child care history, discipline strategies, expected success of child in life, school, and service utilization.

There are five versions of the Developmental History measure, based on the time point of administration. Version 1 is administered during year 1 and includes all of the constructs listed above. In addition, the life changes items are asked both for the pre-kindergarten and kindergarten years. Version 2 is administered during year 2 and includes: perceptions of the parent-child relationship, life changes (only for the previous year), discipline strategies, expected success of child in life and school, and service utilization items. In year 3, the Life Changes measure includes only four areas: perceptions of the parent-child relationship, life changes for the previous year, discipline strategies, and service utilization items. The fourth version is given during year 4 and includes the same four areas as in year 3; however, the choices for discipline strategies changed. Finally, in year 5 and thereafter, respondents are asked only questions about life changes for the previous year and about service utilization.

The Life Changes measure has been modified over time but the basic items are primarily still the same. The measure first assesses whether any events, major or minor, have occurred during the past year for the child; examples of these events include a parent's divorce or death, a move to a new location, or financial problems. These questions are rated on a scale of 0 (did not occur), 1 (minor), and 2 (major). The parent is then asked open-ended questions about his/her relationship with the child; these answers are then scored, as are the interviewer's impressions of the parent for these questions, on a scale of 1 to 5, with 1 representing a very negative response and 5 representing a very positive response. Next, the interviewer describes a series of six situations, and the parent is asked to describe how she/he would handle the misbehavior in that situation (i.e. ignoring the actions, reasoning, directions, etc.). Interviewers then code these responses as 0 (not mentioned) or 1 (mentioned). Lastly, the parent answers questions about the family's use of treatment services during the past year.

II. Report Sample

These exploratory analyses were conducted with the first cohort on the control sample (n=155) and on the normative sample (n=387, 463 with overlap) during the fifth year of the study. Overall, 43 records were missing the whole measure. 14 were missing from the control sample (3 from Durham, 1 from Nashville, 6 from Pennsylvania, and 4 from Washington) and 37 were missing from the normative sample (6 from Durham, 10 from Nashville, 12 from Pennsylvania, and 9 from Washington).

In addition, it should be noted that 370 records were missing 3 or more items; of these, 80 were from the control sample (25 from Durham, 19 from Nashville, 17 from Pennsylvania, and 19 from Washington) and 269 were from the normative sample (76 from Durham, 61 from Nashville, 69 from Pennsylvania, and 63 from Washington); a number of these were from the overlap sample.

Three items in particular were missing responses: what type of treatment facility the child had used for emotional or behavioral difficulties in the past year (349 missing), what type of treatment facility the respondent had used in the past year (358 missing) and which other member of the family had received treatment (367 missing).

III. Scaling

As noted earlier, there are four main sections to the Life Changes measure: perceptions of the parent-child relationship, life changes (only for the previous year), discipline strategies, and service utilization items. These are then broken down into eleven subscales, which are described as follows.

Two subscales measure the perceptions of the parent-child relationship: *Quality of Parent-Child Relationship - Parent Rating* (items Px18, Px219R, Px20, Px21) and *Quality of Parent-Child Relationship - Observer Rating* (items P2x22, Px23, Px24, Px25). The mean value is calculated for each of these subscales.

The third subscale, called the *Stress Scale Sum Score* is summed across the scale to represent the cumulative total of life changes experienced by the family.

The rest of the subscales come as part of the section on discipline strategies. In this portion of the measure, the parent is presented with a series of vignettes that cover episodes of child misbehavior. The parent is asked to describe how they would respond to the scenario. The interviewer then rates whether or not the parent mentioned using any of the following discipline strategies: ignore, reasoning, inductive reasoning, verbal punishment, withdrawal of privileges, commands, proactive guidance, or physical punishment. During year 4 of this study, the strategies change and remain the same for the later years. The new strategies in year 4 are: contingent ignoring, doing nothing, reasoning/inductive reasoning/proactive guidance, inappropriate verbal correction, appropriate verbal correction, withdrawal of privileges, directives, or physical punishment.

Each of the discipline strategies are summed across the vignettes, averaged, and maintained as a

separate scale score. In other words, the items on the scale represent the responses for each vignette for that specific discipline strategy. The subscales based on the vignettes are not included after year 4 because the items involved in these subscales are dropped after year 4.

Cronbach's alpha was calculated for each subscale and are shown in the table below:

Cronbach's Alpha for Scales		
Variable	Normative	High Risk Control
Y5 LC Quality Parent-Child Relat_Observ (LCH5qob)	0.88	0.87
Y5 LC Quality Parent-Child Relat_Parent (LCH5qpr)	0.72	0.74
Y5 LC Stress Scale sum score (LCH5str)	0.66	0.67

Both the *Quality of the Parent-Child Relationship-parent version* and the *Quality of the Parent-Child Relationship-observer version* showed a high reliability for internal consistency for both the normative and control samples. The last subscale, the *Stress Scale Sum Score*, showed a moderate reliability for internal consistency for both samples.

IV. Differences Between Groups

A series of t-tests indicated significant differences between the normative and control samples for all of the subscales. The mean for the normative sample was greater than the mean for the control sample for the *Quality of the Parent-Child Relationship-parent version* and the *Quality of the Parent-Child Relationship-observer version*, while the control mean was higher for the *Stress Scale*. Both the parents and the interviewers in the normative sample were reporting that parents in the normative sample had warmer, closer relationships with their child than did parents and observers in the control sample.

Two of the 8 items not included in the scales also indicated significant differences between the normative and control samples: whether the child had received treatment for emotional or behavioral difficulties (P5C74) and whether the child had received medication for to control behavior or attention (P5C76).

Comparison of Means for Normative and Control for Scales							
Variable	Normative		Control		DF	t Value	Pr > t
	Mean	Std Dev	Mean	Std Dev			
Y5 LC Quality Parent-Child Relat_Observer (LCH5qob)	3.91	0.73	3.63	0.80	418	-3.62	0.0003
Y5 LC Quality Parent-Child Relat_Parent (LCH5qpr)	4.09	0.59	3.63	0.70	244	-6.65	<.0001
Y5 LC Stress Scale sum score (LCH5str)	3.82	3.53	5.16	4.28	238	3.19	0.0016

Comparison of Means for Normative and Control for Items							
Variable	Normative		Control		DF	t Value	Pr > t
	Mean	Std Dev	Mean	Std Dev			
TC: reaction to changes (P5C17)	2.85	1.17	2.91	1.22	395	0.49	0.6255
TC receive Tx for emot. diff. (P5C74)	0.06	0.25	0.31	0.46	181	5.92	<.0001
Type of Tx facility-TC (P5C75)	1.76	1.05	2.15	0.67	34.7	1.69	0.1001
TC receive Rx for behav./attn. prob. (P5C76)	0.03	0.16	0.25	0.43	159	5.91	<.0001

Comparison of Means for Normative and Control for Items							
Variable	Normative		Control		DF	t Value	Pr > t
	Mean	Std Dev	Mean	Std Dev			
Respondent receive Tx (P5C77)	0.12	0.32	0.18	0.38	238	1.68	0.0938
Type of Tx facility-Respondent (P5C78)	2.53	1.16	2.35	0.85	60	-0.68	0.4999
Others in family receive Tx (P5C79)	0.10	0.31	0.16	0.37	239	1.62	0.1059
Which other family-Tx (P5C80)	2.41	0.63	2.21	0.51	51	-1.29	0.2029

V. Recommendations for Use

Analysts should note that the *Quality of the Parent-Child Relationship-parent version* and the *Quality of the Parent-Child Relationship-observer version* were fairly normally distributed for both samples. The *Stress Scale Sum Score* was fairly normally distributed for the control sample but was slightly and positively skewed for the normative sample.

Several items in the normative sample were also positively skewed. These were whether the child had received treatment for emotional or behavioral difficulties (P5C74), whether the child had received medication for to control behavior or attention (P5C76), whether the respondent had received treatment during the past year for personal or emotional difficulties (P5C77), and whether anyone else in the household had received treatment during the past year for emotional or behavioral difficulties (P5C79). The other items in the normative sample were fairly normally distributed.

Finally, most of the items in the control sample were fairly normally distributed. However, two items were slightly and positively skewed. They were whether the respondent had received treatment during the past year for personal or emotional difficulties (P5C77) and whether anyone else in the household had received treatment during the past year for emotional or behavioral difficulties (P5C79).

VI. Item and Scale Means and SDs
