#### **I. Scale Description**

The Parent's Check List is a six-item scale that assesses parents' perceptions of children's aggressive behavior. The Parent's Check List is derived from a 12-item instrument developed by Dodge and Coie (1987).

Each item on the Parent's Check List contains a statement describing a child's aggression-related behavior; for example: "When your child has been teased or threatened, he or she gets angry easily and strikes back." The parent selects the response that evaluates how well the statement applies to the child. Response choices include: "Never True" (0), "Rarely True" (1), "Sometimes True" (2), "Usually True" (3), and "Almost Always True" (4).

#### **II. Report Sample**

This report contains data collected on Cohort 1, Year 3. The data include a high-risk control sample (n=155) and a normative sample (n = 387) for a total n = 463, including overlap. Forty-two of the 463 are missing responses for the

entire Neighborhood Questionnaire, including 29 from the normative group (5 from Durham, 7 from Washington, 7 from Pennsylvania, and 10 from Nashville), and 13 from the control group (including 4 from Durham, 2 from Nashville, 3 from Pennsylvania, and 4 from Washington), with overlap between the normative and control groups. These measures are not included in the analyses.

### III. Scaling

A previous study of the Parent's Check List (1995) identified two subscales of three items each: the Reactive Aggression Subscale (containing items 1, 2, and 3) and the Proactive Aggression subscale (containing items 4, 5, and 6).

The alpha coefficients for the normative sample and control sample are:

	Normative Sample	Control Sample
<b>Reactive Aggression Subscale</b>	0.77	0.73
<b>Proactive Aggression Subscale</b>	0.79	0.79

### IV. Differences Between Groups

T-tests of means for the normative sample and the high-risk control sample yielded the following results:

	Normative Sample		Control Sample		DF	t Value	Pr >  t
	Mean	SD	Mean	SD			
<b>Reactive Aggression Subscale</b>	1.54	0.83	2.24	0.89	425	7.99	<.0001
<b>Proactive Aggression Subscale</b>	0.42	0.58	0.92	0.83	425	7.20	<.0001

### V. Recommendations for Use

T-tests of means for both subscales on the Parent's Check List show significant differences between the normative and control groups. The Proactive Aggression subscale is slightly positively skewed for the normative group. The Proactive Aggression subscale also has a floor effect. For the normative sample, 50% of the Proactive Aggression subscores are zero. For the control sample, 26% of the Proactive Aggression subscores are zero. Analysts considering use of the Parent's Check List should keep in mind that each subscale includes only a small number of items.

### VI. Item and Scale Means and SDs

**Item Means and Standard Deviations – Parent's Check List  
Normative Sample, Year 3, Cohort 1**
