Scored: PDR9

I. Scale Description

The PDR is a 30-item checklist of behavior problems developed at the Oregon Social Learning Center. Parents are asked to indicate the presence of each behavior problem (did or did not occur) during the past 24 hours. The first administration of the PDR took place during the summer interview with parents. Then, parents received several follow-up telephone calls from interview staff during the two weeks following the summer interview. During the first year of the project, four follow-up telephone calls were made to parents. After initial analyses suggested that it required only three reports to get a reliable estimate of child behavior problems, the number of follow-up telephone calls was reduced to two (in addition to one administration at the time of the interview). For all of the following analyses, parent's reports of their child's behavior were averaged across the first three administrations of the PDR.

Finally, in year 9 of administration, this measure underwent some revisions and a number of the items were updated. From year 9 on, there were 37 items in the PDR. Items PxKP1-5 were dropped entirely from the measure. New items included whether the child ate a meal with the parent (PxK6), how many hours the child had spent at home without an adult present (PxK7), whether the parent had talked with the child's friends' parents (PxK13), whether the child had used tobacco (PxK33), alcohol (PxK34), or drugs (PxK35), whether the child had participated in any positive social activities (PxK43), and how accurate the interviewer thought that the information was (PxK44). Several items were similar to the original version of the measure, such as whether the child had eating problems (now item PxK41) or whether the child seemed hyperactive (now item PxK42). This newer version was used for year 9 and every year thereafter in the study.

II. Report Sample

These exploratory analyses were conducted with the first cohort on the control sample ($n=155$) and on the normative sample ($n=387$ including overlap, total $N=463$) from the ninth year of the study. 98 records were missing responses for the entire measure. 31 were from the control sample (6 from Durham, 10 from Nashville, 7 from Pennsylvania, and 8 from Washington) and 84 were from the normative sample (16 from Durham, 31 from Nashville, 18 from Pennsylvania, and 19 from Washington). Some of these may represent overlap between samples.

III. Scaling

When the measure was computerized in year 9, the measure's response options as to whether a behavior had occurred changed such that 0 = no and 1 = yes. Thus, the reversal of the items in the scoring program, as done in previous years, was dropped, except for item 29 (purposefully destroys property). This item continued to be reversed-scored.

Due to the changes in the measure in year 9, the subscales were revised. *Oppositional and Aggressive* was modified to include items MPxK16-MPxK18, MPxK20, MPxK22, and MPxK25-MPxK27. These items included talks back to an adult, screams, swears at someone, physically fights with anyone, teases anyone, lies, takes something that does not belong to them, and disobeys parent.

Three new subscales for year 9+ were *Prosocial*, *Internalizing*, and *Substance Abuse*. *Prosocial* includes 7 items: MPxK19 (talks respectfully to an adult), MPxK21 (completes a household chore), MPxK24 (shows respect for family), MPxK28 (follows family rules at home), MPxK29r (purposefully destroys property), MPxK31 (volunteers to help with family chore), and MPxK39 (talks about his/her activities). *Internalizing* includes 5 items: MPxK36 (shows signs of sadness/depression), MPxK37 (acts shy), MPxK38 (shows signs of anxiety), MPxK40 (has sleeping problems), and MPxK41 (has eating problems). *Substance Abuse* is made up of 3 items: MPxK33 (uses tobacco), MPxK34 (uses alcohol), and MPxK35 (uses drugs).

Cronbach's alphas were calculated for each subscale and are shown in the table below:

Subscales	Cronbach's Alpha	
	Control Sample	Normative Sample
Oppositional and Aggressive (PDR9OAG)	.68	.64
Prosocial (PDR9PRO)	.56	.47
Internalizing (PDR9INT)	.19	.37
Substance Abuse (PDR9SUB)	.58	.19

The reliability coefficients for internal consistency were moderate for the subscale, *Oppositional and Aggressive*, for both the normative and control samples. The *Prosocial* subscale was much more moderate in its reliability coefficients for both samples. *Internalizing* showed a low level of internal

consistency for both samples. The *Substance Abuse* subscale showed a moderate level of internal consistency for the control sample; however, the normative sample showed a low level of internal consistency.

IV. Differences Between Groups

A series of t-tests comparing the high-risk control sample and the normative sample (including the overlap) indicated significant differences for two subscales. These were the *Oppositional and Aggressive* subscale and the *Substance Abuse* subscale.

Several items also indicated significant differences between the normative and control samples. These were the number of hours the child spent in someone's home without an adult (MP9K10), the child acts jealous/demands attention (MP9K30), and the child seems hyperactive (MP9K42). Five items indicated that the mean for the normative sample was greater than the mean for the control sample. These were the parent and child eat a meal together (MP9K8), the number of hours the child spends at home without an adult (MP9K9), the parent talks with the parents of the child's friends (MP9K15), the child participates in positive social activities (MP9K43), and the accuracy of the information (MP9K44).

Accuracy of information (MP9K44)	4.20	0.44	4.15	0.57	363	-1.00	0.3187

V. Recommendations for Use

Analysts should note that analyses were not run for two of the items, MP9K6 and MP9K7. Item MP9K6 refers to the number or occasion of the Parent Daily Report (i.e. 1st, 2nd, 3rd) and item MP9K7 refers to the date of the interview.

Analysts should note that one subscale, *Prosocial*, was fairly normally distributed for both samples. The other three subscales were positively skewed for both the normative and control samples. In addition, these other three subscales also showed floor effects for both samples. For the *Oppositional and Aggressive* subscale in the normative sample, 78% of the responses ranged between 0 and 0.125, while in the control group 65% of the responses ranged between 0 and 0.125. For the *Internalizing* subscale, 77% of the normative sample and 74% of the control sample had responses of zero. Finally, for the *Substance Abuse* subscale, 96% of the normative sample and 89% of the control sample had responses of zero.

The low internal consistency coefficients for certain subscales are not necessarily worrisome. A scale based on a checklist format does not have the same psychometric qualities as a scale based on a common factor model, and a low coefficient alpha is especially likely for measures of low-frequency events (such as substance use).
