Scored: PVIC2

I. Scale Description

The Post-Visit Reaction Inventory is a 60-item checklist that is completed by interviewers within 24 hours after each visit. It was developed to provide staff ratings of the family's physical environment, the child's behavior toward the parent during the visit, the mother's and father's behavior toward the child during the visit, parental behavior toward the visitors and probable validity of the data, and the child's and parents' apparent need for intervention. Parent interviewers complete this same measure (see separate technical reports for more detailed information).

During years one and two of the study, the full measure was completed by the child interviewer. Starting in year 3, a modified version of the measure was completed by child interviewers. This modified version consisted of only 5 questions (see these technical reports for more details).

II. Report Sample

During the administration of this measure in year 2 of the study, there was some confusion in the application of this measure. As a result, two of the sites involved in this study, Pennsylvania and Washington, did not have child interviewers complete checklists separately from the parent interviewers. Instead, at those two sites, both interviewers worked together to complete one checklist. At the other two sites during year 2 of this study, parent interviewers and child interviewers each completed their own checklists. This technical report is based on data submitted by the child interviewers in year 2 for Durham and Nashville only. Data for Pennsylvania and Washington for year 2 are analyzed with the parent-interviewer data for year 2.

These analyses were conducted on the first cohort on the control sample (n = 79) and the normative sample (n = 200, 230 with overlap) from the second year of the study. No records were missing from the control sample and 7 records were missing from the normative sample (all from Nashville).

In addition, it should also be noted that a number of items were missing a large number of responses. Items with a high missing rate included: item O2DHE7--family has a telephone (33 missing), item O2DHE10—family has a television, stereo, or radio (41 missing), item O2DHE11—basic hygiene is observed (37 missing), item O2DCB1—the child complies with parental requests (14 missing), item O2DMB7—mother gives rationales when appropriate (18 missing), item O2DMB9--mother ignores positive behaviors of the child (19 missing), item O2DMB10—mother ignores child misbehaviors (62 missing), items O2DFB1-O2DFB11 (approximately 208 missing) [all of the O2DFB items concern the father's behavior during the interview], and items O2DRV1-O2DRV13 (each item was missing 14 responses).

III. Scaling

The 60 items are divided into the following sections in the measure: items 1-18 report on the family's physical environment, including the availability of books, whether the family owns a television or radio, how clean the house is, the noise level of the neighborhood, and the safety of the neighborhood (items 1-10 are reverse-scored); items 19-25 describe the child's behavior toward the parent, such as complying with a request or talking positively with a parent; items 26-36 describe the mother's behavior toward the child, such as expressing anger toward the child or positively reinforcing the child's behaviors; items 37-47 describe the father's behavior toward the child using the same questions as for the mother; items 48-54 report on the parent's behavior toward the interviewer/visitor, such as the level of the family's preparation for the visit or the level of difficulty in completing the interview by the interviewer; and items 55-60 report whether the child and his/her family is in apparent need of interventions, such as academic, behavior, or marital. The scoring for each item varies depending on which section of the measure it is part of and is included below in the scale descriptions.

There are eight subscales for this measure in years 1 and 2. The scoring for the subscales is based on the scales for the parent version of this measure. All subscales are summary scores that are factor-based or theoretically derived and are calculated using weighted sum scores by: 1) summing the items for each scale, 2) dividing the number of items present for each subject, and 3) multiplying by the number of items on the scale.

The first scale measures *Harsh/Physical Discipline*. Items included in this scale are items 26-30. These items are rated on a scale of 0 (can't rate), 1 (didn't occur), 2 (once), and 3 (more than once). Items include the mother shouting at the child, mother expressing anger toward the child, mother threatening the child, mother using sarcasm toward the child, and mother hitting the child.

The second scale measures *Parental Warmth* and includes items 31, 33, and 36. These items are rated on a scale of 0 (can't rate), 1 (didn't occur), 2 (once), and 3 (more than once). Items include mother speaking to the child in a positive tone, mother giving attention to the child when the child is talking, and mother positively reinforcing positive child behaviors.

The next scale measures *Child Warmth toward Mother* and includes items 21, 22, and 24. These items are the child doing something extra positive for the parent, the child talking positively with the parent, and the child being physically affectionate with the parent. These items are rated on a scale of 0 (can't rate), 1 (didn't occur), 2 (once), and 3 (more than once).

The fourth scale measures *Child Noncompliance toward Mother* and includes items 20, 23, and 25. These items are the child refusing to comply with a parental request or command, the child verbalizing anger toward the parent, and the child being physically aggressive toward the parent. These items are rated on a scale of 0 (can't rate), 1 (didn't occur), 2 (once), and 3 (more than once).

The fifth scale reports the *Child-Friendly Interior*. Items included in this scale are items 1-6, 8, and 9 and are reverse-scored and rated on a scale of 0 (can't rate), 1 (no), and 2 (yes). These items are whether the child has indoor and outdoor play areas, whether there are age-appropriate toys for the child, whether the child has a place for his/her own personal things, whether the physical environment allows for free movement for the child, and whether the family has a pet.

The sixth scale reports on the *Utilities* for the family. This scale is reverse-scored so the scale is 0 (can't rate), 1 (no), and 2 (yes), and includes items 7 (whether the family has a telephone) and 10 (whether the family has a television, stereo, or radio). For this scale only, the items are summed to create a score.

The next scale is *Home Environment*. This scale includes 3 items: 12 (how clean is this dwelling), 13 (how safe is the interior of the building), and 14 (how many rooms are in this dwelling). All 3 items are rated on a 5-point scale, with a 1 on items 12 and 13 indicating a low score and a 4 indicating a high score. A zero for all 3 items indicates that the item could not be rated. For item 14, the 5-point scale indicates a range of rooms, with a 1 representing a low number and a 4 representing a high number (6 or more).

The last scale is *Neighborhood Environment* and includes 4 items. The items are 15 (how safe is the area outside of this dwelling), 16 (describes the street where the dwelling is located), 17 (the noise level of the neighborhood), and 18 (the safety of the neighborhood). Item 15 was reversed such that: 1 = very safe, 2 = average, 3 = slightly dangerous, and 4 = very dangerous. Item 16 was recoded such that: 1 = rural, 2 = mainly residential, 3 = mixed residential/commercial, 4 = mostly commercial. For items 17 and 18, a low score represents a positive rating, while a high score represent a negative rating. A high score for this scale would indicate that the family is living in a very unsafe neighborhood.

For any item whose choices included "Can't rate" as a response, these responses were converted to missing for the purpose of analysis.

Cronbach's alphas were calculated for each subscale and are shown in the table below:

Subscales	Cronbach's Alpha	
	Control Sample	Normative Sample
Harsh/Physical Discipline (PVIC2HPD)	.83	.75
Parental Warmth toward Child (PVIC2PWM)	.78	.80
Child Warmth toward Parent (PVIC2CWM)	.56	.54
Child Noncompliance (PVIC2CNC)	.64	.50
Child-Friendly Interior (PVIC2CFI)	.67	.73
Utilities (PVIC2UTL)	-.07	.18
Neighborhood Environment (PVIC2NEI)	.91	.85
Home Environment (PVIC2HOM)	.73	.74

Most of the scales showed a moderate to high level of internal consistency except for one scale. One scale, *Utilities*, showed an inadequate level of internal consistency.

IV. Differences Between Groups

A series of t-tests between the high-risk control sample and the normative sample (excluding the overlap) indicated significant differences for two of the subscales: *Parental Warmth toward Child* and *Child Noncompliance*. In addition, five of the subscales revealed that the mean for the normative sample was greater than the mean for the control sample. These were *Parental Warmth toward Child*, *Child Warmth toward Parent*, *Child-Friendly Interior*, *Utilities*, and *Home Environment*.

Four items also indicated significant differences between the normative and control samples. They were the mother ignores the positive behaviors of the child (O2DMB9), whether the child needs academic intervention

(O2DRV6), whether the child needs behavior intervention (O2DRV7), and whether there is a reason to doubt the validity of the visit (O2DRV12).

Analysts should also note that extremely small sample sizes were recorded for many of the father items. The t-tests for these items do not therefore give a clear picture for these items, particularly the following items: the father shouts at the child (O2DFB1), the father expresses anger toward the child (O2DFB2), the father threatens the child (O2DFB3), the father uses sarcasm toward the child (O2DFB4), the father ignores the positive behaviors of the child (O2DFB9), and the father ignores the child's misbehaviors (O2DFB10).

Post-Visit Inventory—Subscales: Normative vs. Control

Variable	Normative Sample		Control Sample		DF	t Value	Pr > t
	Mean	Std Dev	Mean	Std Dev			
Harsh/Physical Discipline (PVIC2HPD)	5.51	1.15	5.73	1.51	211	1.18	0.2383

O2DRV13	1.02	1.65	0.85	1.44	214	-0.74	0.4587

V. Recommendations for Use

Analysts should note that five of the subscales showed a fairly normal distribution for both the normative and control samples. These subscales were *Parental Warmth toward Child*, *Child Warmth toward Parent*, *Child-Friendly Interior*, *Neighborhood Environment*, and *Home Environment*. Three subscales, *Harsh/Physical Discipline*, *Child Noncompliance*, and *Utilities*, were positively skewed for both the normative and control samples.

Two subscales, *Harsh/Physical Discipline* and *Utilities*, showed a floor effect. The *Harsh/Physical Discipline* subscale reported 75% of the responses in the normative sample and 71% of the responses in the control sample to be 5 (the lowest possible score).

The *Utilities* subscale showed a floor effect for the normative sample only. For the *Utilities* subscale, 82% of the responses for the normative sample were 0, the lowest possible score. It should also be noted that the *Utilities* subscale is composed of only two items, OxDHE7 and OxDHE10. The inter-item correlations for this scale in both the normative and control samples were quite low. The inter-item correlation for these two items in the normative sample of the *Utilities* subscale was 0.14 and -0.05 for the control sample. In addition, it should be noted that the *Utilities* subscale consistently showed a ceiling effect for many of the years of this study in the parent interviewer version of this measure. It is unclear as to why the child interviewer version would show the opposite effect.

Analysts should use caution with the subscales *Harsh/Physical Discipline* and *Utilities*.

Finally, the sample sizes for the items about the father's behaviors were quite low for both samples. Analyses such as t-tests on these items, O2DFB1-O2DFB11, reported sample sizes as low as low as 9 for the normative sample and 7 for the control sample. Data for these items should be read with caution.

VI. Item and Subscale Means and SDs

Post-Visit Reaction Inventory—Child Interviewer Items Year 2 Normative Sample

Simple Statistics							
Variable	N	Mean	Std Dev	Sum	Minimum	Maximum	Label
O2DHE1	193	0.12435	0.33084	24.00000	0	1.00000	TC Has an Indoor Play Area
