I. Scale Description

The Post-Visit Reaction Inventory Youth is based on the Post-Visit Reaction Inventory Child used sporadically from year 1 to year 13. This is a 60-item checklist that was completed by interviewers within 24 hours after each visit. It was developed to provide staff ratings of the family's physical environment, the child's behavior toward the parent during the visit, the mother's and father's behavior toward the child during the visit, parental behavior toward the visitors and probable validity of the data, and the child's and parents' apparent need for intervention. The Post Visit Inventory Youth is a 4 item questionnaire the interviewer completes in order to evaluate the respondent's cooperation during the visit.

II. Report Sample

These exploratory analyses were conducted on the first cohort on the Control sample (n = 155) and the Normative sample (n = 387, 463 with overlap) from the fifteenth year of the study. Overall, 93 records were missing the complete measure. Thirty-six records were missing from the Control sample (7 from Durham, 14 from Nashville, 3 from Pennsylvania, and 12 from Washington) and 57 records were missing from the Normative sample (13 from Durham, 17 from Nashville, 13 from Pennsylvania, and 14 from Washington).

III. Frequencies and Differences Between Groups

The user must note that a period (.) represents a missing value and 'S' represents "Skipped".

	High or low risk sample	
	HI	LO
Interviewees receptivity toward interviewer		
.	36	57
S	5	3
Hostile	.	1
Withdrawn	6	5
Average	46	102
Very warm and friendly	62	140
How truthful do you think the interviewees responses were?		
.	36	57
S	5	3
Very truthful	92	186
Somewhat truthful	17	42
Somewhat untruthful	2	1
Very untruthful	3	19
How open were the interviewees responses to the questions?		
.	36	57
S	5	3
Very open	81	197
Somewhat open	26	43
Somewhat guarded	6	7
Very guarded	1	1
How carefully did the interviewee answer the questions?		
.	36	57
S	5	3
Very carefully	85	200
Somewhat carefully	26	45
Somewhat carelessly	2	2
Very carelessly	1	1

A test of association was executed to assess differences between sample types. None of the associations were found statistically significant.

IV. Recommendations for Use

This measure was specifically designed for the gathering of general data for use with the Fast Track project. It was not meant for widespread use.
