Unscored: C9Y

Scored: SAC9

I. Scale Description

The School Adjustment – Child questionnaire is a 20-item scale that evaluates children's perceptions of their current adjustment to school. The questionnaire also asks if the child has changed schools. The School Adjustment – Child questionnaire was created for the Fast Track Project.

Each item on the questionnaire contains a statement about a school experience; for example, "I stayed out of trouble with teachers and disciplinarians at school." The child selects the response that estimates how true each statement is for the past school year. Questionnaire items include statements about academic performance, discipline problems, and interactions with other students and staff. Response choices include: "Never True" (1), "Seldom True" (2), "Sometimes True" (3), "Usually True" (4), and "Always True" (5).

A parent version of the School Adjustment questionnaire was also administered to parents of children involved in the Fast Track Project. (See the separate technical report for School Adjustment – Parent.) The parent version and the child version have 12 items in common.

¹ This report.

² The Year 7 report.

II. Report Sample

This report contains data collected on Cohort 1, Year 9. The data include a high-risk control sample (n=155) and a normative sample (n = 387) for a total N = 463, including overlap. One hundred twelve of the 463 are missing responses for the entire School Adjustment – Child questionnaire, including 83 from the normative group (15 from Durham, 19 from Washington, 19 from Pennsylvania, and 30 from Nashville), and 29 from the control group (including 5 from Durham, 9 from Nashville, 7 from Pennsylvania, and 8 from Washington), with overlap between the normative and control groups. These measures are not included in the analyses.

III. Scaling

A previous study of the School Adjustment – Child questionnaire (Maumary-Gremaud, 2000) identified three subscales: Relationships with Other Students (containing items 3, 4, 8, 9, 13 and 14), Academic and Disciplinary Difficulties (items 1, 2, 5, 7, 10, 12, 15, and 19), and General Aspects about the School and Teachers (items 6, 11, 17, 18 and 20). Results of the study also suggested that Item 16 does not belong on any subscale; therefore, this item is not included in the Year 9 analyses. The ordering of responses in items 1, 4, 7, 8, 9, 10, 12, 13, 14, 15, 17, and 19 was reversed before scoring to provide consistency among all the item responses. Higher scores indicate better school adjustment; lower scores indicate poorer adjustment.

The alpha coefficients for the normative sample and control sample are:

	Normative Sample	Control Sample
Relationships with Other Students	0.72	0.64
Academic and Disciplinary Difficulties	0.76	0.65
General Aspects / School and Teachers	0.73	0.60

IV. Differences Between Groups

T-tests of means for the normative sample and the high-risk control sample yielded the following results:

	Normative Sample		Control Sample		DF	t Value	Pr > t
	Mean	SD	Mean	SD			
Relationships with Other Students	4.49	0.56	4.33	0.58	365	-2.56	0.0110
Academic and Disciplinary Difficulties	3.78	0.66	3.41	0.61	365	-5.04	<.0001
General Aspects / School and Teachers	3.85	0.75	3.65	0.74	364	-2.52	0.0121

A summary of frequencies for the question “Did you enter a new school?” (NEWSCH) is in the table below:

“Entered New School” by Group			
Entered new school Yes=1 No=0	Sample		
Frequency Col Pct	Control	Normative	Total
Did not enter new school (0)	88 69.84	192 79.34	280 76.09
Entered new school (1)	38 30.16	50 20.66	88 23.91
Total	126	242	368
Frequency Missing = 96			

For the NEWSCH variable (Did you enter a new school?), with $\chi^2 (1, N = 368) = 4.11, p < 0.04$, the hypothesis of independence between risk category (Normative or High-Risk Control) and entering a new school can be rejected. In Year 9, more control students (30.16%) than normative students (20.66%) entered a new school..

V. Recommendations for Use

The Relationships with Other Students subscale distribution has a ceiling effect in the normative samples, with 52% of scores at or above 4.66. The Relationships with Other Students distribution has a slight negative skew in the control group. T-tests of means for all subscales on the School Adjustment – Child questionnaire show significant differences between the normative and control groups. Correlations among subscales are moderate and all three subscales also have moderate internal consistency. Depending on the construct of interest, these subscales should be useful to analysts.

VI. Item and Scale Means and SDs

**Item Means and Standard Deviations – School Adjustment Questionnaire
Normative Sample, Year 9, Cohort 1**

Variable	Label	Mean	N	Std Dev	Minimum	Maximum
rc9y1	School year difficult	3.66	304	1.01	1.00	5.00
C9Y2	Easy time handling academic demands	3.46	304	1.00	1.00	5.00
C9Y3	Got along with friends	4.24	304	0.90	1.00	5.00
rc9y4	Other kids hit/made fun of me	4.48	304	0.90	1.00	5.00
C9Y5	Stayed out of trouble	3.46	304	1.26	1.00	5.00
C9Y6	I had a good year at school	3.93	304	1.04	1.00	5.00
rc9y7	School work was really hard	3.34	304	0.98	1.00	5.00
rc9y8	I had a hard time making friends	4.57	304	0.81	1.00	5.00
rc9y9	Other kids tried to make me do bad things	4.61	304	0.78	1.00	5.00
rc9y10	I got into trouble this year	3.97	304	1.15	1.00	5.00
C9Y11	I liked the new things about school	3.28	304	1.07	1.00	5.00
rc9y12	I did not do well in academics	3.34	304	1.16	1.00	5.00
rc9y13	I did not have many friends	4.61	304	0.78	1.00	5.00
rc9y14	Other kids bothered me this year	4.26	304	0.94	1.00	5.00
rc9y15	Teachers were on me because I broke rules	3.99	304	1.19	1.00	5.00
rc9y17	Teachers do not care about kids	4.38	304	0.96	1.00	5.00
C9Y18	Kids will succeed at my school	3.94	303	1.01	1.00	5.00
