Scored: SHS4

I. Scale Description

The Social Health Profile (Spring) is a 41-item measure that assesses a child's ability to work productively and to handle social interactions in a classroom environment. The Social Health Profile was created for the Fast Track Project. The Social Health Profile contains items from the TOCA-R – Teacher Observation of Child Adaptation, Revised (Werthamer-Larsson, et al., 1991) and the Social Competence Scale (CPPRG, 1995).

The Social Health Profile contains 37 behavior-rating items and four additional information items. The TOCA-R contributed 26 of the behavior-rating items. These items estimate several dimensions of behavioral adjustment to school: Cognitive Concentration, Authority Acceptance, and Social Contact. The Social Competence Scale contributed eleven behavior-rating items that assess other facets of social adjustment. The four remaining items ask for the number of days that the child has been absent, whether the child uses tobacco or drugs, and the likelihood that the child will be promoted to the next grade level in the coming year.

¹ Antecedent measure for the Social Health Profile.

² The Social Health Profile discussed in this report.

Each behavior-rating item contains a descriptive phrase such as: “Learns up to ability,” “Teases classmates,” “Initiates interactions with others,” and “Concentrates.” The teacher assesses how well each descriptor is true for a target child. Responses are coded on a six-point scale: “Almost Never (0),” “Rarely (1),” “Sometimes (2),” “Often (3),” “Very Often (4),” and “Almost Always (5).”

Responses to the remaining four items are unscaled. The teacher selects the number of days that the child has been absent during the previous two weeks. For the substance abuse items (Has the child smoked tobacco/used drugs), responses include “No,” “Yes,” and “Don’t know.” The grade level promotion item (“Will the child be promoted...”) has these response choices: “Yes,” “Unsure,” “No-Repeat,” “No-Special Ed.” The four unscaled additional-information items are not included in the scoring routine.

II. Report Sample

This report contains data collected on Cohort 1, Year 4. The data include a high-risk control sample (n=155) and a normative sample (n = 387) for a total N = 463, including overlap. Of the 463 subjects, 67 are missing all responses, including 44 from the normative group (14 from Durham, 11 from Washington, 6 from Pennsylvania, and 13 from Nashville), and 23 from the control group (10 from Durham, 4 from Nashville, 5 from Pennsylvania, and 4 from Washington), with overlap between the normative and control groups. None of these measures was used in the analyses.

III. Scaling

The Social Health Profile contains the following subscales³:

- Cognitive Concentration: items 2R (self-reliant), 4R (works hard), 7R (learns up to ability), 8 (distractible), 9R (concentrates), 14 R (completes assignments), 16 (poor effort), 17R (eager to learn), 20R (stays on task), 22R (pays attention), 32 (mind wanders), 34R (works well alone)
- Authority Acceptance: items 3 (takes property), 5(yells at others), 6 (fights), 10 (stubborn), 12 (lies), 15 (breaks rules), 19 (teases others), 21 (breaks things), 23 (harms others), 24 (disobedient)
- Social Contact: items 25R (initiates interactions), 26R (plays with others), 28R (social contact with others), 31 (avoids contact)
- Prosocial: items 1R (friendly), 13R (helpful), 18R (resolves peer problems), 33R (understands others), 35R (suggests without bossiness)
- Emotional Regulation: items 11R (controls temper in a disagreement), 27R (appropriate expression of needs/feelings), 29R (thinks before acting), 30R (can calm down)
- Social Competence: a score for the Prosocial and Emotional Regulation items combined.

Three additional subscales are available to score smaller groups of items that reflect the narrowband dimensions of behavior problems. They are:

- Overt Aggression: items 5 (yells), 6 (fights), 19 (teases), 21 (breaks things), 23 (harms others)
- Oppositional: items 10 (stubborn), 15 (breaks rules), 24 (has trouble accepting authority)
- Covert Antisocial: items 3 (takes people’s property), 12 (lies).

Subscale scores are calculated as the mean of item responses. If more than half of the items for a scale are missing responses, the score is not calculated. Measures with all responses missing are not scored.

³ R denotes items that require reversed scoring.

The alpha coefficients for the normative sample and control samples are:

	Normative Sample	Control Sample
Cognitive Concentration Subscale	0.97	0.94
Authority Acceptance Subscale	0.91	0.87
Social Contact Subscale	0.87	0.88
Prosocial Subscale	0.88	0.83
Emotional Regulation Skills Subscale	0.88	0.88
Social Competence Scale (Combined Prosocial/Emotional Reg.)	0.93	0.90
Overt Aggression Narrowband	0.86	0.82
Oppositional Narrowband	0.84	0.74
Covert Antisocial Narrowband	0.74	0.72

IV. Differences Between Groups

T-tests of means on the subscale scores between the normative and control samples yielded the following results:

	Normative Sample		Control Sample		DF	t Value	Pr > t
	Mean	SD	Mean	SD			
Cognitive Concentration Subscale	1.66	1.22	2.58	1.03	406	7.49	<.0001
Authority Acceptance Subscale	0.88	0.82	1.79	0.86	400	10.16	<.0001
Social Contact Subscale	1.20	0.90	1.49	1.00	406	2.92	0.0037
Prosocial Subscale	1.67	1.03	2.52	0.95	406	8.05	<.0001
Emotional Regulation Skills Subscale	1.77	1.17	2.88	1.17	406	8.93	<.0001
Social Competence Scale (Combined Prosocial/Emotional Reg.)	1.72	1.05	2.68	0.98	406	8.91	<.0001
Overt Aggression	0.82	0.83	1.66	0.94	399	9.08	<.0001
Oppositional	1.18	1.12	2.22	1.06	386	8.47	<.0001
Covert Antisocial	0.62	0.89	1.5	1.14	403	8.39	<.0001

V. Recommendations for Use

T-tests of means for subscale scores on the Social Health Profile show significant differences between the normative and control groups for this study year. The internal consistency measure (Cronbach alpha values) indicates that the subscale scores are useful. The Covert Antisocial Narrowband and the Overt Aggression Narrowband subscale distributions show a slight positive skew in the normative group. Researchers should keep in mind that the narrowband subscale scores contain only a few items – the Oppositional subscale contains three items and the Covert Antisocial contains two. The narrowband subscales may be useful in some research studies to focus on narrowband dimensions of behavior problems identified on other measures.

VI. Item and Scale Means and SDs
