Raw: C4C

Scored: SPR4

### **I. Scale Description**

The Seattle Personality Questionnaire is a 44-item measure completed by the target child. This measure is designed to determine three dimensions of symptomatology (anxiety, conduct problems, and somatization), depression, school dislike, and a lie scale. The symptomatology and lie items were based on the Seattle Personality Questionnaire for Young School-Aged Children, which is a 50-item self-report personality questionnaire for children ages 6 through 10 (Kusche, Greenberg, and Beilke, 1988). The school dislike items were borrowed from two scales: School Loneliness (Asher, Hymel, & Renshaw,

1984, Asher & Wheeler, 1985) and School Sentiment (Ladd, 1990). Responses for all of the items are on a scale of 0 to 2, with 0=no, 1=yes, and 2=don't know/no response. In year 4, the responses for all of the items changed to a scale of 0 to 4, with 0=almost never, 1=sometimes true, 2=often true, 3=almost always, and 4=don't know/no response. No other changes were made to the measure in year 4.

## II. Report Sample

These exploratory analyses were conducted on the first cohort on the high-risk control sample (n = 155) and the normative sample (n = 387, 463 with overlap) from the fourth year of the study. 56 records were missing the complete measure. 17 records were missing from the control sample (5 from Durham, 1 from Nashville, 3 from Pennsylvania, and 8 from Washington) and 47 records were missing from the normative sample (9 from Durham, 11 from Nashville, 11 from Pennsylvania, and 16 from Washington). These numbers may reflect some overlap between the two samples.

## III. Scaling

There are eight subscales for this measure. All of these subscales are based on factor analysis or theoretically derived. All of the subscales are calculated by 1) summing the non-missing responses, 2) dividing by the number of non-missing responses, and 3) multiplying by the total number of items on the scale. As stated earlier, the scale for all of the items is as follows: 0=no, 1=yes, and 2=don't know/no response. Items with a score of "2" were coded as missing for purposes of analysis.

There are three dimensions of symptomatology: anxiety, conduct problems, and somatization. The *Anxiety* score consists of the following items: 3 (worry about what other children say), 4 (afraid to try new things), 8 (worry a lot that other people might not like him/her), 12 (hard to ask if can join kids he/she doesn't know in a game), 29 (worry about what other people think), and 32 (worry about being teased). The *Conduct Problems* score includes 8 items: 1 (often talk in class when not supposed to), 11 (take and keep things that aren't theirs), 19 (get into a lot of fights), 23 (hard to listen and follow directions), 25 (tell a lot of lies), 27 (argue a lot with other people), 30 (often tease other kids), and 33 (sometimes break things on purpose). The *Somatization* score contains 5 items: 6 (get a lot of aches and pains), 13 (have a lot of scary dreams), 14 (get a lot of headaches), 18 (get a lot of tummy aches), and 26 (feel like throwing up a lot).

The *Depression* score consists of 10 items. They are 34 (feel unhappy a lot), 35 (feel like crying a lot), 36 (feel upset about things), 38 (feel that you do things wrong a lot), 39 (feel that most things are not much fun), 40 (feel sorry for self), 41 (have trouble falling/staying asleep), 42 (feel tired a lot), 43 (feel like not eating), and 44 (want to be by self a lot).

The *Lying* scale consists of three items: 9 (like everyone you know), 16 (always good), and 21 (ever feel mad-reversed).

Three scales address the child's feelings about school: *School Dislike*, *School Loneliness*, and *School Sentiment*. *School Dislike* contains a total of 9 items. They are 5 (hard to make friends at school), 7 (think school is fun-reversed), 10 (have kids to play with at school-reversed), 15 (the kids at school like you-reversed), 17 (like your teacher-reversed), 20 (lonely at school), 24 (nice things happen to you at school-reversed), 28 (feel unhappy at school), and 31 (wish you could stay home from school a lot). *School Loneliness* includes items 5, 10, 15, 20, and 28 while *School Sentiment* includes items 7, 17, 24, and 31.

Cronbach's alphas were calculated for each subscale and are shown in the table below:

Subscales	Cronbach's Alpha	
	Control Sample	Normative Sample
Anxiety (SPR4ANX)	.74	.72
Conduct Problems (SPR4CON)	.78	.76
Somatization (SPR4SOM)	.70	.72
Depression (SPR4DEP)	.77	.78
Lying (SPR4LIE)	-.07	.13
School Dislike (SPR4SCD)	.66	.67
School Loneliness (SPR4SCL)	.64	.68
School Sentiment (SPR4SCS)	.60	.58

All but one of the scales showed an adequate level of internal consistency for both the control and the normative samples. The *Lying* scale showed an inadequate level of internal consistency for both of the samples.

#### IV. Differences between Groups

A series of t-tests between the high-risk control sample and the normative sample (including the overlap) indicated significant differences for five of the scales: *Conduct Problems*, *Depression*, *School Dislike*, *School Loneliness*, and *School Sentiment*. One scale, *Lying*, showed the mean for the normative sample to be greater than the mean for the control sample.

One item, C4CSP37 (have trouble paying attention), also indicated significant differences between the high-risk control sample and the normative sample (including the overlap). This item was not included on any of the subscales.

Seattle Personality Questionnaire-Original: Subscales

Variable	Normative Sample		Control Sample		DF	t Value	Pr >  t
	Mean	Std Dev	Mean	Std Dev			
Anxiety (SPR4ANX)	6.30	4.18	7.04	4.55	405	1.64	0.1017
Conduct Problems (SPR4CON)	5.01	4.32	7.50	5.19	405	5.14	<.0001
Somatization (SPR4SOM)	5.35	3.59	6.03	3.83	404	1.76	0.0798
Depression (SPR4DEP)	9.48	5.70	11.54	6.34	405	3.32	0.0010
Lying (SPR4LIE)	5.58	1.86	5.40	1.72	405	-0.97	0.3304
School Dislike (SPR4SCD)	7.12	4.72	8.87	5.18	404	3.41	0.0007
School Loneliness (SPR4SCL)	3.37	3.11	4.24	3.36	404	2.58	0.0101

<b>School Sentiment (SPR4SCS)</b>	3.77	2.79	4.63	3.18	405	2.80	0.0054
---------------------------------------	------	------	------	------	-----	------	--------

Seattle Personality Questionnaire-Original: Items

Variable	Normative Sample		Control Sample		DF	t Value	Pr >  t
	Mean	Std Dev	Mean	Std Dev			
C4CSP2 (feel afraid a lot)	0.92	0.91	1.09	1.02	405	1.76	0.0786
C4CSP22 (teacher gets mad too much)	1.22	1.14	1.38	1.14	405	1.35	0.1785
C4CSP37 (have trouble paying attention)	0.72	0.93	1.09	1.10	405	3.59	0.0004

**V. Recommendations for Use**

Analysts should note that all of the scales were fairly normally distributed for both the control and the normative samples. However, with the *Lying* scale showing such a low level of internal consistency, caution should be used when using this scale.

**VI. Item and Scale Means and SDs**
