Report

Maumary-Gremaud, A. (2000). Teacher Report Form (Technical Report) [Online]. Available: <http://www.fasttrackproject.org/>

Data Sources

Raw: t6c

Scored: trf6

I. Scale Description

The Teacher Report Form includes 113 items describing behavior problems. Teachers respond to each item using a 3-point scale, noting whether each behavior is Not True, for the child, Somewhat or Sometimes True, or Very True or often True.

II. Report Sample

Preliminary analyses were conducted on Cohort 1 Normative (N=387) and High-Risk control (N=155, overlap=79) samples. 69 students were missing the entire measure (15% of the sample), including 59 from the normative sample (15%) and 23 from the high-risk control sample (15%). The non-respondent included 13 students from Durham, 25 from Nashville, 19 from Pennstate, 12 from Seattle, 41 white and 24 black students, 30 girls and 39 boys.

III. Scaling

The scoring method was redone in 1991 by Achenbach and Edelbrock. This scoring system includes T-scores and raw scores for two broad-band dimensions of child problem behavior: Externalizing and Internalizing. In addition, the scoring method includes t-scores and raw scores for several narrow-band scales describing: Delinquency and Aggression, Attention Problems, Withdrawal, Anxiety/depression, Somatic Complaints, Social Problems, Thought Problems and Sex Problems.

IV. Differences Between Groups

T-tests of difference of means were conducted between the normative (non-high-risk) and high-risk control. The tests were found significant at the .05 significance level for most of the variables. The Somatic Complaints scale showed no difference in raw or t-scores between the control and normative (non-high-risk) samples. The means for the withdrawal were shown to be marginally significantly different. For all the variables where there was a significant difference, the students in the control group exhibited consistently more behavior problems than the non-high-risk students of the normative sample.

V. Recommendations for Use

The broad-band and narrow-band scores should be utilized for analyses. These scores have the advantage been well-established in the field and allow for comparability between our samples and results of other investigators who used the TRF.

VI. Item and Scale Means and SD's

Normative sample:
