Scored: BCS3

I. Scale Description

This measure is an adapted version of the Behavioral Coding System (BCS; Forehand & McMahon, 1981) and consists of 45 items. The BCS is employed during the Parent-Child Interaction Task (PCIT), which occurs in the home during the summer interview. The child interviewer serves as the observer and the parent interviewer organizes the session. The PCIT is comprised of four separate segments, which occur in the following sequence: Child's Game (free play, 5 minutes), Parent's Game (parent-directed play, 5 minutes), Lego Task (5 minutes), and Clean-Up (3 minutes). Both parent behaviors and child behaviors are recorded during each task by the child interviewer; the amount of time for each task and the total time are also recorded and used in the scoring of the subscales.

II. Report Sample

These exploratory analyses were conducted with the first cohort on the control sample (n=155) and on the normative sample (n=387, 463 with overlap) from the third year of administration of this study, excluding the treatment subjects. 50 students were missing the entire measure. Of these, 16 were control students (5 from Durham, 2 from Nashville, 3 from Pennsylvania, and 6 from Washington) and 42 were normative students (8 from Durham, 14 from Nashville, 7 from Pennsylvania, and 13 from Washington). Several of the students missing the entire measure were from the overlap sample. In addition, a number of students were missing parts of the measure; these students were omitted from the analyses.

III. Scaling

The Behavioral Coding System is used to analyze the Parent-Child Interaction Task. Three parent behaviors (total commands, positive attention, and negative attention) and two child behaviors (compliance and noncompliance) are recorded sequentially in 30-second intervals for each task. In addition, there is an interval-sampling measure of child inappropriate or disruptive behavior (whining, biting, profanity, etc.). Subscale scores are the proportion of the totals of each rated behavior across the four tasks divided by the total length of the session. Also, one other score, called alpha commands, is based on the total number of commands a parent gives, such as an order, suggestion, question or rule to a child and it is appropriate and feasible for the child to make a motoric or verbal response; for example, a parent may say, "Play with these blocks" (Conduct Problems Prevention Research Group, 1993); this number is then summed across the four tasks and divided by the total length of the session, as are the other subscale scores.

As a result there are seven subscales, four for the parent and three for the child: total commands, total alpha commands, total positive attention, total negative attention, total compliance, total noncompliance, and total disruptive behavior.

Cronbach's alphas are reported in the table below:

Variable Name	Control Sample	Normative Sample
Total Commands (BCS3TOT)	.63	.62
Total Alpha Commands (BCS3ALP)	.58	.57
Total Positive Attention (BCS3POS)	.70	.71
Total Negative Attention (BCS3NEG)	.73	.73
Total Compliance (BCS3COM)	.58	.57
Total Noncompliance (BCS3NON)	.74	.74
Total Disruptive Behavior (BCS3DIS)	.74	.74

Four scales indicated an acceptable reliability for both the normative and control samples: total positive attention, total negative attention, total noncompliance, and total disruptive behavior. These alphas ranged from .70 to .74. Three of the scales showed poor reliability for both samples, with the correlation coefficients ranging from .57 to .63: total commands, total alpha commands, and total compliance.

IV. Differences Between Groups

A series of t-tests indicated no significant differences for the subscales between the normative and control samples. Two of the individual items showed significant differences between the normative and control samples: O3E22 (negative attention for Parent's Game) and O3E45 (time total).

One subscale, the total amount of positive attention from the parent, showed the normative mean to be greater than the control mean. Seven items indicated that the mean for the normative sample was greater than the mean for the control sample: O3E7 (alpha commands for Parent's Game), O3E17 (positive attention for Parent's Game), O3E18 (positive attention for Lego Task), O3E19 (positive attention for Clean-Up), O3E20 (positive attention total), O3E24 (negative attention for Clean-Up), and O3E27 (compliance for Parent's Game).

Behavior Coding System
The TTEST Procedure

Variable	Normative Sample		Control Sample		DF	t Value	Pr > t
	Mean	Std Dev	Mean	Std Dev			
BCS3TOT	2.10	1.19	2.27	1.28	411	1.38	.1685
BCS3ALP	1.11	0.65	1.14	0.67	408	0.50	.6141
BCS3POS	0.68	0.63	0.62	0.66	411	-0.96	.3394
BCS3NEG	0.03	0.08	0.04	0.08	411	1.51	.1323
BCS3COM	1.08	0.65	1.09	0.67	411	0.21	.8342
BCS3NON	0.04	0.07	0.04	0.08	409	1.04	.2989
BCS3DIS	0.04	0.12	0.06	0.14	410	1.39	.1658

V. Recommendations for Use

Analysts should note that only one subscale (total commands) had a fairly normal distribution. Two subscales were highly and positively skewed for both the normative and control samples: total negative attention and total disruptive behavior. The other subscales were slightly and positively skewed for both samples. Two items were fairly normally distributed for both samples: O3E3 (total commands for Lego Task) and O3E5 (total commands total). Four other items were fairly normally distributed for the normative sample: O3E8 (alpha commands for Lego Task), O3E9 (alpha commands for Clean-Up), O3E13 (beta commands for Lego Task), and O3E28 (compliance for Lego Task). Item O3E4 (total commands for Clean-Up) was fairly normally distributed for the control sample.

Only three items indicated a negative skewness: O3E43 (time or Lego Task--normative sample only), O3E44 (time for Clean-Up—both samples), and O3E45 (total time—both samples). The rest of the items were positively skewed in both samples. Several items were highly skewed for both samples: O3E21 (negative attention for Child's Game), O3E22 (negative attention for Parent's Game), O3E23 (negative attention for Lego Task), O3E24 (negative attention for Clean-Up), O3E31 (noncompliance for Child's Game), O3E32 (noncompliance for Parent's Game), O3E34 (noncompliance for Clean-Up), O3E36 (inappropriate behavior for Child's Game), O3E37 (inappropriate behavior for Parent's Game), O3E38 (inappropriate behavior for Lego Task), and O3E40 (inappropriate behavior total).

In other words, parents and children both tended to display more positive attention, less negative attention, more compliance, less noncompliance, and less disruptive behavior during the 4 tasks of the Parent-Child Interaction Task.
