I. Scale Description

The Life Changes measure, which was originally part of a larger measure called Developmental History, consists of a 15-minute interview that is completed with the parent as part of the summer interview. The Developmental History, developed and used by Dodge and colleagues (1990), is part of a longitudinal study of family origins of children's behavior problems. The measure assesses a number of constructs: perceptions of the parent-child relationship, developmental history, life changes, child care history, discipline strategies, expected success of child in life, school, and service utilization.

There are five versions of the Developmental History measure, based on the time point of administration. Version 1 is administered during year 1 and includes all of the constructs listed above. In addition, the life changes items are asked both for the pre-kindergarten and kindergarten years. Version 2 is administered during year 2 and includes: perceptions of the parent-child relationship, life changes (only for the previous year), discipline strategies, expected success of child in life and school, and service utilization items. In year 3, the Life Changes measure includes only four areas: perceptions of the parent-child relationship, life changes for the previous year, discipline strategies, and service utilization items. The fourth version is given during year 4 and includes the same four areas as in year 3; however, the choices for discipline strategies changed. Finally, in year 5 and thereafter, respondents are asked only questions about life changes for the previous year and about service utilization.

The Life Changes measure has been modified over time but the basic items are primarily still the same.

<div align="center">

1

</div>

The measure first assesses whether any events, major or minor, have occurred during the past year for the child; examples of these events include a parent's divorce or death, a move to a new location, or financial problems. These questions are rated on a scale of 0 (did not occur), 1 (minor), and 2 (major). The parent is then asked open-ended questions about his/her relationship with the child; these answers are then scored, as are the interviewer's impressions of the parent for these questions, on a scale of 1 to 5, with 1 representing a very negative response and 5 representing a very positive response. Next, the interviewer describes a series of six situations, and the parent is asked to describe how she/he would handle the misbehavior in that situation (i.e. ignoring the actions, reasoning, directions, etc.). Interviewers then code these responses as 0 (not mentioned), 1 (mentioned), or 2 (typical). The parent is then asked their opinion about the child's success in school and in life, followed by questions about older siblings and whether any family members have received any treatment services during the past year.

II. Report Sample

These exploratory analyses were conducted with the first cohort on the control sample (n=155) and on the normative sample (n=387, 463 with overlap) during the second year of the study. Overall, 31 records were missing the whole measure. 8 were missing from the control sample (4 from Durham and 4 from Washington) and 24 were missing from the normative sample (3 from Durham, 6 from Nashville, 3 from Pennsylvania, and 12 from Washington).

In addition, it should be noted that 247 records were missing 3 or more items; of these, 90 were from the control sample (27 from Durham, 20 from Nashville, 23 from Pennsylvania, and 20 from Washington) and 203 were from the normative sample (58 from Durham, 49 from Nashville, 57 from Pennsylvania, and 39 from Washington); a number of these were from the overlap sample.

There were three questions that were missing high numbers of responses. They were: P2CDH68, how is the older sibling doing in school (240 missing); P2CDH70, how old is the older same-sex sibling (242 missing); and, P2CDH71, is the target child like the older same-sex sibling (243 missing). It would appear that the high number of missing responses would indicate that the parent did not have a child older than the child in the Fast Track Project or the parent simply refuses to answer the question. Several of the missing responses were from subjects in the overlap sample.

III. Scaling

As noted earlier, there are four main sections to the Life Changes measure: perceptions of the parent-child relationship, life changes (only for the previous year), discipline strategies, and service utilization items. These are then broken down into twelve subscales, which are described as follows.

Two subscales measure the perceptions of the parent-child relationship: *Quality of Parent-Child Relationship - Parent Rating* (items P2C18, P2C219R, P2C20, P2C21) and *Quality of Parent-Child Relationship - Observer Rating* (items P2C22, P2C23, P2C24, P2C25). The mean value is calculated for each of these subscales.

The third subscale, called the *Stress Scale Sum Score* is summed across the scale to represent the cumulative total of life changes experienced by the family.

Eight of the subscales come as part of the section on discipline strategies. In this portion of the measure, the parent is presented with a series of vignettes that cover episodes of child misbehavior. The parent is asked to describe how they would respond to the scenario. The interviewer then rates whether or not the parent mentioned using any of the following discipline strategies: Ignore, Reasoning, Inductive Reasoning, Verbal Punishment, Withdrawal of Privileges, Commands, Proactive Guidance, or Physical Punishment.

Each of the discipline strategies are summed across the vignettes, averaged, and maintained as a separate scale score. In other words, the items on the scale represent the responses for each vignette

for that specific discipline strategy.

The last subscale, entitled *School and Life Success Mean Score*, is calculated by summing and averaging the mean value for the four questions the parent answers to predict how well his/her child will do in both school and in life. This subscale was used only for years 1 and 2.

Cronbach's alpha was calculated for each subscale and are shown in the table below:

Cronbach's Alpha for Scales		
Variable	**Normative**	**High Risk Control**
Y2 LC Ignore/Do Nothing mean score (LCH2idn)	0.31	0.36
Y2 LC Reasoning mean score (LCH2rsn)	0.67	0.68
Y2 LC Inductive Reasoning mean score (LCH2irs)	0.28	0.23
Y2 LC Verbal Punishment mean score (LCH2vpn)	0.64	0.73
Y2 LC Withdraw of Privileges mean score (LCH2wpr)	0.47	0.41
Y2 LC Directives mean score (LCH2dir)	0.59	0.54
Y2 LC Proactive Guidance mean score (LCH2prg)	0.53	0.53
Y2 LC Physical Punishment mean score (LCH2ppn)	0.47	0.42
Y2 LC Quality Parent-Child Relat_Parent (LCH2qpr)	0.73	0.74
Y2 LC Quality Parent-Child Relat_Observ (LCH2qob)	0.90	0.89
Y2 LC Stress Scale sum score (LCH2str)	0.56	0.59
Y2 LC School and Life Success mean scor (LCH2sls)	0.55	0.69

The reliability coefficients for several scales indicated an acceptable reliability: the *Quality of the Parent-Child Relationship-parent version* (both samples), and the *Quality of the Parent-Child Relationship—observer version* (both samples), ranging from .73 to .90. Four subscales indicated a poor reliability for both samples: the *Ignore Mean Score*, the *Inductive Reasoning Mean Score*, the *Withdrawal of Privileges Mean Score*, and the *Physical Punishment Mean Score*, ranging from .23 to .49. The other subscales indicated lower reliability levels.

IV. Differences Between Groups

A series of t-tests indicated significant differences for five of the subscales. The high-risk control sample had higher means relative to the normative sample on 2 scales: *Withdrawal of Privileges* and *Physical Punishment.* However, the normative sample had higher means relative to the high-risk control on 3 scales: *Quality of Parent-Child Relationship—parent version*, *Quality of Parent-Child Relationship—observer version*, and *School and Life Success.*

The t-tests for items not included in any scale indicated significant differences for 6 items: P2C74, P2C74, P2CFR1- P2CFR3, and P2CFR5. For each of these items, the high-risk control group scored higher than the normative group, on average.

V. Recommendations for Use

Analysts should note that the distributions for the subscales in both the normative and control samples were fairly normally distributed with slight amounts of skewness. One exception would be the subscale *Proactive Guidance Mean Score*, which was positively skewed for both the normative and control samples.

A number of items were positively skewed for both the normative and control samples. Seven of these skewed items came from the first 16 items of the measure that asked whether certain life events occurred in the family during the past year. These items included: P2C5 (divorce), P2C6 (parental separation), P2C7 (remarriage), P2C8 (parent-child separation), P2C10 (legal problems), P2C11 (problems with drugs or alcohol), and P2C15 (job loss).

Other items were highly skewed in both samples: P2C49 (use of physical punishment for not playing nicely with another child), P2C73 (use of physical punishment for refusing to go to bed on time), P2C76 (whether the child receives medication to control behavior or attention), P2C34OL (ignoring the child's teasing of another child), P2C42OL (ignoring the child not playing nicely with others), P2C44OL-control sample only (using inductive reasoning to deal with the child not playing nicely with others), P2C48OL (using proactive guidance to deal with a child not playing nicely with others), P2C52OL (using inductive reasoning when a child makes a mess and does not clean it up), P2C56OL (using proactive guidance when a child makes a mess and does not clean it up), P2C58OL (ignoring when a child disobeys), P2C60OL (using inductive reasoning when a child disobeys), P2C64OL (using proactive guidance when a child disobeys), P2C68OL (using inductive reasoning when a child refuses to go to bed or to eat), and P2C72OL (using proactive guidance when a child refuses to go to bed or to eat). In other words, out of 6 scenarios, parents in both samples were more likely to use the techniques of ignoring the misbehavior, using inductive reasoning, and using proactive guidance to discipline their children in four of the scenarios.

Despite the normal distributions of the subscales, analysts should use most of the subscales with caution due to their inadequate internal reliability coefficients. Only two subscales indicated acceptable reliabilities for both samples, the *Quality of Parent-Child Relationship—parent version* and the *Quality of Parent-Child Relationship—observer version*. In addition, analysts need to remember that the disciplinary techniques of ignoring, inductive reasoning, and using proactive guidance are highly skewed for both samples.
