I.   Scale Description

My Exposure to Violence –- Revised is adapted from the same measure created for the Project on Human Development in Chicago Neighborhoods (Buka et al., 1996). The Fast Track Project version of My Exposure to Violence – Revised collects information on a student's exposure to five types of violent events. The events include: beating, attack with a weapon, gun shot, accident or other event resulting in death or serious injury, and threat by another person with serious injury. In Year 11, My Exposure to Violence was revised to ask about violent events that had happened only within the previous two years. For each type of event, the respondent is also asked whether the event occurred at home, at school, or in the neighborhood; whether the event occurred within the past year; and whether the event occurred more than once.

Response choices for all items except event frequency are "Yes (1)" and "No (0)." The item that asks for frequency of each violent event ("Has this happened once or more than once?") has the response choices "Once (1)" and "More than once (2)."

My Exposure to Violence contains two question sets for each type of violent event. One question set elicits information from the respondent as a *witness* to the event. The other set asks for the same information when the respondent is a *victim* of a violent event. For example, a "witness" question set would include: "Have you ever *seen someone* threatened? More than once? At home? At school?" etc. The parallel "victim" questions would be: "Have you ever *been* threatened? More than once? At home? At school?" etc.

II. Report Sample

This report contains data collected on Cohort 1, Year 11. The data include a high-risk control sample (n=155) and a

normative sample (n = 387) for a total N = 463, including overlap. Of the 463 subjects, 147 are missing all responses, including 102 from the normative group (17 from Durham, 26 from Washington, 31 from Pennsylvania, and 28 from Nashville), and 45 from the control group (8 from Durham, 12 from Nashville, 14 from Pennsylvania, and 11 from Washington), with overlap between the normative and control groups. None of these measures was used in the analyses.

III. **Scaling**

My Exposure to Violence contains two subscales and a total scale. The subscales are: *Witnessing Violence* and *Victimization*. For Year 11, subscores are calculated as the sum of responses to the question sets for witnessing violence or for being a victim of violence. The total score sums all response scores.

A comment on scoring is in order. For Fast Track Project purposes, the summation method of calculating scores has been a useful general estimate of a student's total environmental exposure to violence. However, this method assumes that each type of violent event is of equal severity compared to the other types. Clearly, it would be difficult to classify "witnessing a threat" with "witnessing death by gun shot" as equal in severity. Therefore, for researchers interested in a more precise estimate, analyzing responses on My Exposure to Violence using an item response model may be an appropriate course of action.

The alpha coefficients of the Victimization score, the Witnessing Violence score, and the Total score for the normative sample and control samples are:

	Normative Sample	Control Sample
Witnessing Violence	0.86	0.88
Victimization	0.78	0.71
Total Score	0.88	0.86

IV. **Differences Between Groups**

T-tests of means on the subscores between the normative and control samples yielded the following results:

	Normative Sample		Control Sample		DF	t Value	Pr > |t|
	Mean	SD	Mean	SD			
Witnessing Violence	4.84	4.48	5.17	5.14	343	0.62	0.5385
Victimization	0.84	2.00	1.16	2.06	343	1.37	0.1705
Total Score	5.68	5.63	6.34	6.04	343	0.98	0.3259

V. **Recommendations for Use**

T-tests of means show no significant differences between the normative and control groups for the Witnessing Violence subscore, the Victimization subscore, or the Total Score. However, alpha values for both subscores and the Total Score are good.

The distribution of the Total Score is slightly positively skewed in the normative group. In the control group, the Witnessing Violence distribution is slightly positively skewed. The Victimization subscore distribution has a floor effect in both groups with 76% of scores at zero in the normative group, and 69% at zero in the control group

VI. Item and Scale Means and SDs
